

Aircraft classification

Aircrafts intact

Intact example 1: Clear cross-shaped returns on dark taxiway

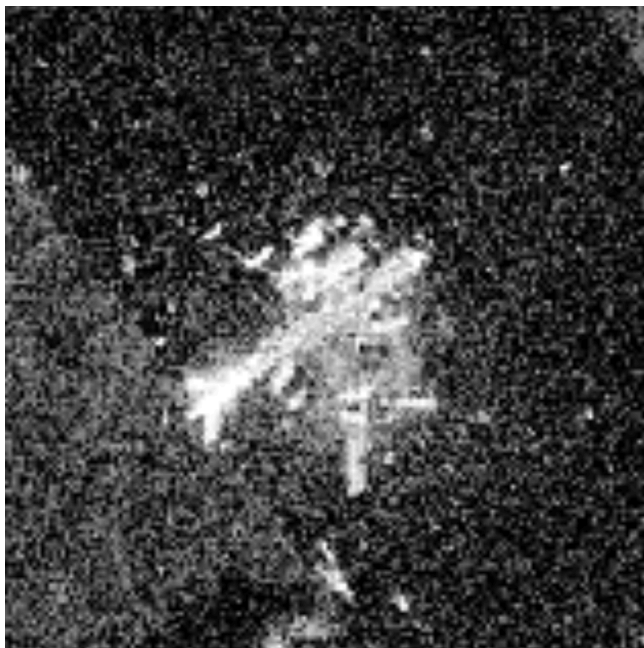

Intact example 2: Compact signature; dark pavement visible around aircraft

Damaged aircrafts

Damaged example 1: Bright outburst/debris field around aircraft

Damaged example 2: Irregular bright clusters along taxiway

Selection method

Damaged aircraft show a messy bright outburst next to the airframe: scattered returns from debris or broken parts on the runway reduce the dark, smooth pavement signature beside the plane. Intact aircraft have a smaller, cleaner bright return and the dark airstrip remains visible immediately next to the target.
